

Installation and Changes

Installation:

- Unzip the "Ws2000.zip" file.
- Run setup

The new version ("WinScribe 2000") will be placed in the "ws2000" directory. It does not matter which drive you place it on.

When you enter the Scouts module, either by clicking on the new scout button or clicking on the first line of the blank list, the program will ask "Do you want to import data from an earlier "WinScribe"? " If you have been using an earlier version of "WinScribe" click the "Yes" button and follow the directions. If you have not used a earlier version, just click the "No" button and start using it.

There are now dropdown comboboxes for entry of items.

Date input can be done two ways in the Scout data module:

Typed in (don't type too fast you will get ahead of the fuction) six digits.
Click on the calender select the date (calender can stay open) then type "S" in the date field.

Special date keys: "S" = Same date "X" = Not Applicable (NA)
"T" = Today's date "C" = Clear date

Other Special Keys:

"PageUp" & "PageDown" = take you to the other page of the scout's report.

Other Cool things:

All the data is contained in it perspective module.

Ex: Scouts data is in "Scouts.tbk" etc.

A backup is made of each file as it is saved. The files with the "bak" ext. can be Renamed with the tbk ext. to replace a corrupt module.

Happy Scribing!
